

Klaar Skyframe garðskálar

In the north, summers are short and precious. A few bright weeks of warmth, long evenings, and open skies — then the season quickly turns. Klaar Modular was created to make those moments last.

Klaar was founded by Harri and Siim, background in industrial design and with experience in real estate for boutique hotels and restaurants across the north. They saw the need for a structure that would let people enjoy nature in comfort — not just for weeks, but year-round.

Our pods extend outdoor living beyond summer, protecting against wind, rain, and cool evenings, while keeping the connection to nature intact. Strong wooden frames, clean Nordic design, and year-round durability make them as practical as they are beautiful.

For those who value privacy, comfort, and timeless architecture, Klaar offers a way to enjoy the garden, terrace, or waterfront in every season. A quiet place to gather, dine, and live closer to nature — without waiting for perfect weather.

Skyframe is the latest design from Klaar Modular: a panoramic pod with a lighter, more open frame that enhances views and brings nature closer.

Extended model room example

We spend our lives  
moving between walls.  
But the moments we  
remember most  
happen outside.

Klaar creates spaces  
that give those  
moments back —  
comfortable, calm, and  
always connected to  
nature.

In a garden, Skyframe becomes a private retreat — a place to read, rest, or share evenings surrounded by nature.

Placed by the water, it turns into a dining room with open horizons, where the light lasts longer and the wind stays outside.

As a workspace or on a rooftop, Skyframe changes the rhythm of work. Surrounded by light and sky, it becomes a place to think clearly, create freely, and stay productive while remaining connected to nature.

Wherever it stands, Skyframe feels less like a structure and more like a way to stay closer to the world outside.

Example Skyframe configuration with suggested garden furnishing

Entering a Klaar Skyframe means staying in touch—with the horizon, the changing weather, and your own sense of being.

Every shift of light, each breath of wind, becomes part of the interior — not something to escape, but to live within.

Lýsing í skammdeginu

- Mood-stíllanleg lýsing
- Innfelld dimmanleg LED lýsing
- Stýrt með síma

Pláss fyrir 8- 10 einstaklinga

- Utánmál – 3.8 m x 3.8 m
- Hæð – 2.3m – 3.3 m
- Þyngd – 550 kg
- Stærð – 10.9 m
- Mismunandi hurðaútfærslur

## The Klaar Skyframe

**PRO-RAILING.IS**

Example Skyframe configuration with suggested furniture  
rooftop furnishing

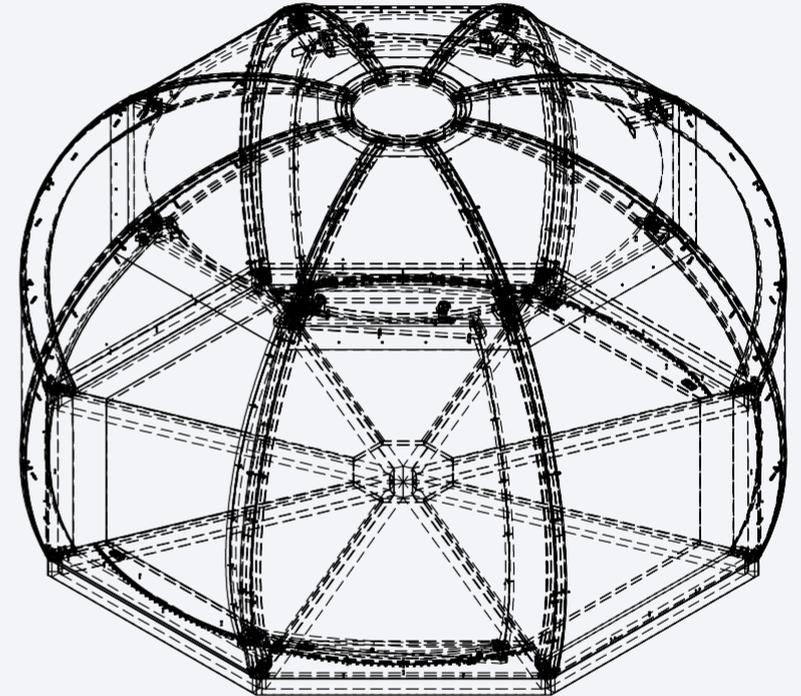

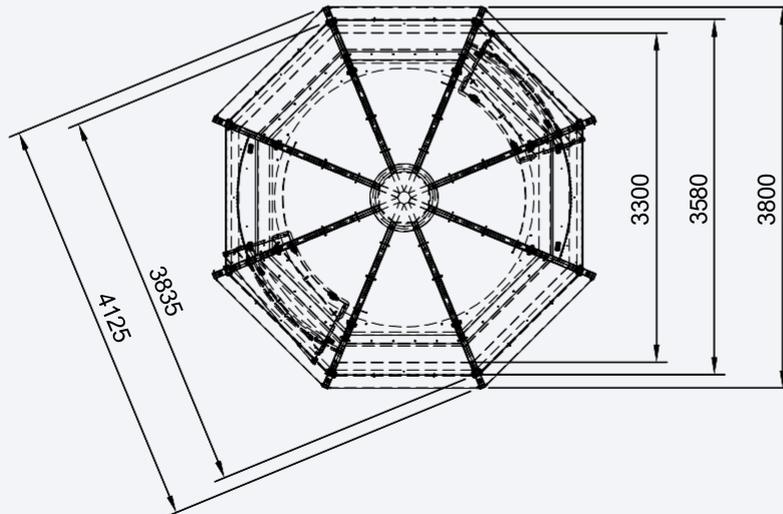

The Klaar Skyframe's unique combination of contemporary form and design flexibility is a standout feature. Its strong shape offers both aesthetic appeal and practical benefits, such as natural wind deflection and impeccable structural strength.

### Frame colors

### Window colors

## The design

We have created a range of shading solutions aimed at balancing comfort, temperature control, and transparency across different seasons. Clients can select from dark-tinted polycarbonate panels, which minimize glare and solar heat gain while maintaining a full 360° view, or custom textile covers and curtains made from durable, weather-resistant canvas.

Each choice offers a unique sense of privacy and ambiance: the tinted panels provide a serene, architectural feel, whereas the textile coverings bring a softer, more tactile warmth. Both options blend smoothly with the structure's design, preserving the dome's clean appearance while allowing it to adapt to varying light conditions and weather.

## Klaar Skyframe

The Klaar Skyframe is now available.

### Klaar Skyframe verðlist 2026

Uni kúla – ein hurð 2.760.000- m vsk  
Stærð 4125x3800mm H = 2285

Duo kúla – tvöföld hurð 2.860.000- m.vsk  
Stærð 4125x3800mm H = 2285

Aveny kúla – tvær hurðar 3.240.000- m.vsk  
Stærð 4125x3800mm H = 2285

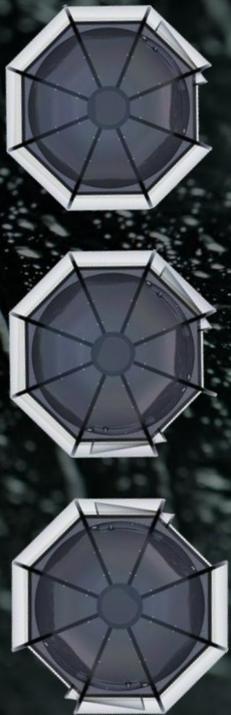

Aukabúnaður – viðbætur :

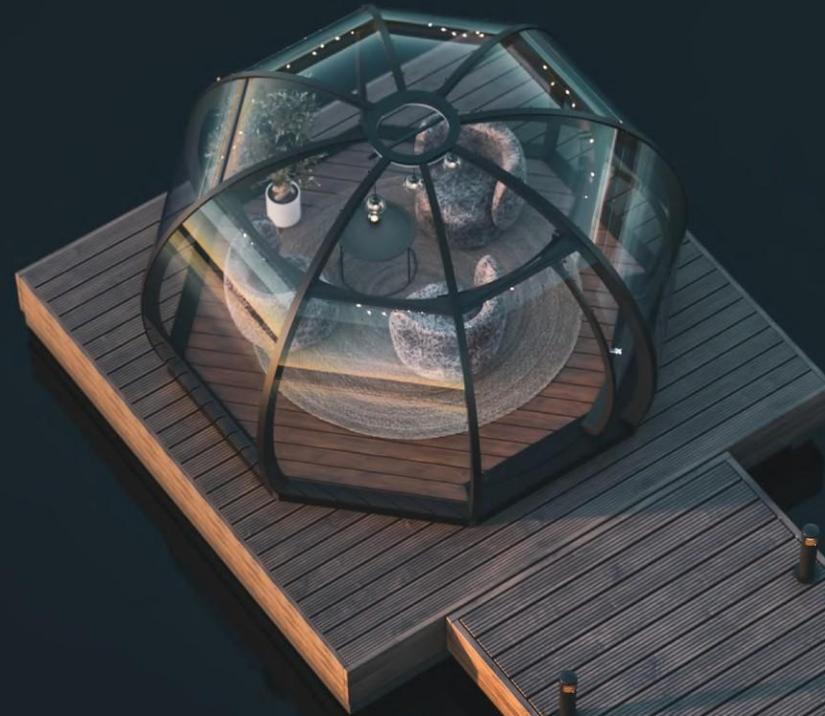

Innbyggð LED lýsing	94.000- m.vsk
Dökkt pólýkarbon gler	118.000- m.vsk
Undirlag – trépallur thermowood	406.500- m.vsk
Burðarkerfi litað að eigin vali	168.000- m.vsk

Alla skála má stækka og bæta við einingum.

Verðdæmi stækkun :  
Uni kúla stækkuð um bil 4.015.000- m vsk
